

Web Development Mock Test (20 Questions with Professional Answers)

1. What is HTML?

HTML (HyperText Markup Language) is the standard markup language used to create and structure web pages.

2. What is the difference between `<div>` and `<span>`?

`<div>` is a block-level element; `<span>` is an inline element.

3. What are semantic HTML elements?

Semantic elements describe their meaning clearly, such as header, nav, section, article, and footer.

4. What is the purpose of the alt attribute?

It provides alternative text for images and improves accessibility.

5. What is CSS?

CSS controls the appearance, layout, and design of HTML elements.

6. Explain the CSS Box Model.

The Box Model consists of Content, Padding, Border, and Margin.

7. Difference between relative and absolute positioning?

Relative positions an element from its normal location; absolute positions it relative to the nearest positioned ancestor.

8. What is Flexbox?

A CSS layout model used for efficient alignment and distribution of elements.

9. What is Bootstrap?

A front-end framework for building responsive and mobile-first websites.

10. What is the Bootstrap Grid System?

A 12-column responsive layout system.

11. Difference between container and container-fluid?

Container has fixed responsive widths; container-fluid spans the full width.

12. How do you create a Bootstrap button?

Use classes such as: `class="btn btn-primary"`.

13. What is JavaScript?

A programming language used to create dynamic and interactive web pages.

14. Difference between let, const, and var?

var is function-scoped; let and const are block-scoped. const cannot be reassigned.

15. What is an Event in JavaScript?

An action such as a click, keypress, or page load that can trigger code execution.

16. Difference between == and ===?

== compares values; === compares both value and data type.

17. What is Python?

A high-level, interpreted, and object-oriented programming language.

18. Difference between List and Tuple?

Lists are mutable; tuples are immutable.

19. What are Python Functions?

Reusable blocks of code designed to perform specific tasks.

20. What is OOP in Python?

Object-Oriented Programming is based on classes and objects, using encapsulation, inheritance, polymorphism, and abstraction.
